# Why federal libraries choose WorldShare Management Services

## You define success, WMS helps you get there

WorldShare Management Services (WMS) provide your federal library with everything you need to offer rapid and responsive access to your large collection of subject-specific resources. And it helps you connect to other libraries for the non-subject-specific material your users may need. WMS keeps your data, records, and collections secure without sacrificing users' access.

WMS centralizes workflows into a single interface, so you save time and effort by eliminating duplicative processes. You can automate tasks like e-resource management to have more time for valuable projects. This allows you to be more responsive to requests without increasing staffing levels or budget.

WMS includes traditional applications and much more at no additional charge, including e-resource management, serials management, authority control, discovery, metadata management, resource sharing, reports, and APIs for customized workflows.

## Secure and protect your data with confidence

OCLC has proudly achieved United States Federal Risk and Authorization Management Program (FedRAMP) Authority to Operate (ATO). This program certifies that WMS meets the rigorous security requirements your library demands.

You can rest assured that WMS meets your high standards for data security and protects your information through assessment, authorization, and continuous monitoring. Our data processes and standards will keep your sensitive data safe.

WMS's listing in the FedRAMP Marketplace makes it easier for you to work with us to explore new services and solutions or to renew your existing services, ensuring stability for your library each fiscal year.

Dozens of federal libraries, including branches and independent agencies already participate in the WMS community. Some of these libraries support military and defense, research, technology, energy, commerce, agricultural, judicial, and executive users at the federal level.
